

THE NATIONAL FOOTBALL STADIUM AT WINDSOR PARK

## METALWORK SOLUTIONS

SPECIALISTS IN THE FABRICATION AND INSTALLATION OF METALWORK MEET THE STRICT DEADLINES FOR THIS PRESTIGIOUS PROJECT...

# Bespoke solutions from A-Met Engineering

**A**-Met Engineering manufactured a wide range of bespoke metalwork solutions at the new National Football Stadium at Windsor Park. The focus of the company's work was on access to the stadium including barriers, gates and balustrades throughout various sections of the stadium and involved solutions to protect both fans and players/officials. This meant that the company was placed under added pressure, particularly as the stadium remained fully operational with both Irish League games and European Championship Qualifiers taking place throughout the duration of the project. A-Met also faced the challenge of not only installing their product range on time but also ensuring they met various health

and safety regulations as well as strict UEFA stadium category 4 standards. "We have a lot of experience manufacturing solutions such as this, so that aspect of the project wasn't a challenge," explained Tony McCann, Director at A-Met Engineering. "However, with stadium remaining operational for games our challenge was to ensure that we met the very strict deadlines in place. As we were working on access solutions we simply had to meet these deadlines, so that added a lot of pressure to the project. "However, we were able to clear all these obstacles and we're proud of our involvement in this prestigious project." The success of the National Football Stadium at Windsor Park is a reflection of the high standards that A-Met engineering

consistently delivers. Operating from a 2,000sqm purpose-built production facility based in Cookstown, A-Met Engineering manufactures metalwork solutions for the construction industry across Ireland and the UK. A-Met Engineering has specific expertise in the fabrication and installation of mild and stainless steel as well as brass and uses the latest technology to ensure high level of quality. While access stairways, balustrades, walkways and decorative metal work form much of the company's manufacturing output, A-Met Engineering has the skills and resources to fabricate a wide and varied range of bespoke metal products for use throughout the construction and associated industries.
